Product-oriented Software Engineer with over two years of experience building AML and Personal Trade Monitoring solutions for financial services. Experienced translating business needs into technical solutions, defining requirements, aligning cross-functional stakeholders, and navigating complex regulatory environments.

PROFESSIONAL EXPERIENCE

Northwestern Mutual

Milwaukee, WI

Software Engineer II

Nov 2025 - Present

- Led migration of Personal Trade Monitoring application to the cloud and consolidated 40 redundant data pipelines into 10 by engaging users to understand pain points, shaping roadmap with milestones, and managing competing directives from risk and enterprise architecture stakeholders
- Implemented a data retention workflow to purge over 100 million records via aligning compliance, vendor, and engineering stakeholders on implementation plan and translating between technical and regulatory concepts
- Reduced time spent collecting batch statistics by 85% by building automated reporting dashboard, including conducting user research and data analysis to identify display preferences and key metrics
- Increased quarterly delivery throughput 3x through partnering with product manager to prioritize features in regards to enterprise risk, business need, and technical longevity
- Guided junior software engineers to understand product roadmap and vision impact by demonstrating how technical requirements map to business impact

Software Engineer I

Jan 2024 - Nov 2025

- Helped establish a more collaborative delivery model between engineering and compliance stakeholders during a department SDLC pilot by facilitating agile ceremonies and planning for a team of 10 engineers
- Defined monitoring use cases for a new mutual fund series through engagement with compliance business users, translating regulatory scenarios into application logic and implementation requirements

PROJECTS

SEC Intelligence Platform

- Designed a near real-time SEC intelligence platform for investors by analyzing SEC filing data, conducting research in filing report use cases, and transforming streaming data into a searchable financial dataset
- Evaluated ingestion, storage, and search architecture tradeoffs while exploring additional product enhancements for analytics and AI use cases, including a text-to-SQL feature

LEADERSHIP & INVOLVEMENT

- Mentored two software engineering interns through delivery of a production data quality feature, defining success criteria, shaping scope, and guiding execution from concept to launch
- Member-at-large for LGBTQ+ Employee Resource Group, supporting employee engagement and community outreach events

SKILLS

- **Product:** Requirements Definition, Stakeholder Alignment, Product Discovery, Roadmap Planning, Agile Delivery, Vendor Solution Evaluation, Workflow Optimization, Agile/Scrum Facilitation, SDLC, PDLC
- **Technical:** Jira, Confluence, Microsoft & GitHub Copilot, Python, SQL, Java, Power BI, REST APIs, AWS, Kubernetes, Docker, Git, CI/CD

EDUCATION

University of Wisconsin-Madison

Madison, WI

Bachelor of Science: Computer Science | GPA: 3.83

Sep 2020 - Dec 2023
